English 

Subj: Reference letter

We used the company BOCO Pardubice as a fast service company for welding screws and barrels on our machines a few years ago. About 10 years ago, we addressed them to supply a new extruder that would be used for optimizing geometry of screws and barrels for manufacturing grinded and recycled PVC.

We used to have a standard extruder of the diameter 60 mm with the main motor power of 30 kW, they remade it according to our requirements and designed a screw of the diameter 75 mm with significantly higher performance for powder material.

Four years ago, we ordered extruders with evacuation motors and degassing of hard PVC of the screw diameter 90 mm. These extruders have been in continuous operation since then and we are still very satisfied with them. Therefore two years ago, we decided to address the company BOCO with a requirement of 6 twin-screw extruders that will be in pairs leaning back to back so we could produce joint product at once. This has significantly reduced the machine area and arrangement in the hall and the quality of output material has also greatly increased. All this is thanks to the twin screw geometry from the company BOCO. We would like to say thank you.

Kind regards
